

FEATURED FIXTURES MODELS 550 & 551

Both the 550 and the 551 are part of the Hauslights Family of fixtures which are value priced. These indirect wall mounted fixtures are both intended to provide glare-free ambient light or decorative accent light. The simple and clean design blends well with many styles of architecture. Originally designed for compact fluorescent lamps they have adapted well to LED. The 550 is available with LED GU24 based lamps for 120V applications at a price point that is equivalent to a CF including the lamps. The 551, the ADA version, is available with an LED array and driver for 120/277V applications, with 0-10V dimming standard.

Both these fixtures are easily modified both for variation in size, finish and laser cut graphics, including room numbers. Popular for multi-family housing, they are also used for commercial and hospitality applications.
