

BRONZE & SUSTAINABILITY

Borden Lighting strives for sustainability in its products and practices. The enduring beauty and durability of bronze is an integral part of our sustainability efforts. Many of our outdoor products are fabricated from "commercial bronze" which is 90% copper and 10% zinc. Our bronze has a recycled content of 90% or more, which means it has less embodied energy. And because no paint or clear coating is used it has less impact on air and water quality.

Our bronze wedge series of 718, 719, 720 and 721 fixtures are some of the most sustainably made light fixtures available. The cast mounting backs are made from 100% recycled aluminum and the wedge hoods are made from bronze with 90% recycled content.
