

## EXPANDED FABRIC PRODUCT OFFERING

Commercial and institutional designers have embraced fabric shades, in particular, drum shapes. In response to that Borden Lighting has expanded their fabric shade product offering, recently having introduced three new LED purpose-built fixtures that add to our compact fluorescent fixtures. **See photos left.**

The 157 surface ceiling mount and the 357 pendant offer strong downlight as well as ambient light. The 307 pendant is based on an indirect LED light engine, which delivers smooth broad downlight as well as uplight through the acrylic top cover. **See photos below.**

To see our standard fabric offering, click [HERE](#). Fabric, like color, has endless possibilities. Please contact your rep or the factory for special fabrics. We can also work with you for special applications where you want to provide the fabric. Where maintenance is an issue, we offer a "Trilam" fabric where the fabric is covered with a piece of matte clear plastic allowing the shade to be easily cleaned. The Trilam is offered in our standard cream linen. Ask your rep about this or call the factory.

We are also offering a "hand-rolled edge" detail, in lieu of the standard "self-fold and tape trim." **See photo below.** This cleaner look requires hand labor and adds some cost. Contact your rep for more information.
