

NEW & UPDATED TABLE LAMPS

Borden Lighting is proud to introduce two new purpose built LED table lamps. Both table lamps are distinguished by indirect, glare-free lighting utilizing Bridgelux high brightness LED arrays. The LED's are 3000K, 82CRI and are mounted in a holder so that they can be changed or serviced. Both provide smooth and wide distribution. The 803 is a companion to our other shade fixtures and is available in six different fabric options.

In addition to these two new table lamps we have updated the other table lamps. Table and floor lamps are now available with an optional convenience outlet mounted in the base. Floor lamps are now furnished with a pull chain, instead of a switch mounted in the base.
