Our new family of Landscape fixtures follows our tradition of clean and simple design based on fundamental forms. The designs are all intended to complement, rather than compete with the surrounding architecture while providing illumination for the landscape as well as wayfinding. As with all our products we endeavor to combine design and sustainability and quality which delivers true value.

All the fixtures in the family offer LEDs, with several of them purpose-built and some adapted to existing designs that offer CF lamping as well. They are all designed as downlights or utilize indirect light for low glare landscape solutions.

Both bollards and post tops utilize chip-on-board LED arrays and high quality drivers with multi-volt and 0-10 volt dimming. Our standard LEDs are 3000K, 80+CRI, but 2700K and higher color temps are available.

Most of the bollards and post tops have companion wall mounted fixtures that allow for continuity of design.
