

NEW PRODUCTS New Product Selector

Borden Lighting introduces our new family of "See Through Pendants", the 323, 324 and 325 shown below. These fixtures all provide glare-free up and down light made possible by flexible LEDs. All these fixtures use constant current LEDs with 0-10V integral drivers. We also are introducing the classic globe fixture updated for LEDs, both in a GU24 base LED A-lamp version and an array and driver version. The 305 pendant provides up and down light with arrays and 120/277 drivers and 0-10V dimming. Click an image below to go directly to the website and catalog page. We also have published a new **Product Selector**

which is a quick reference guide to all our products. Ask your rep for your own copy or call the factory.
