

NEW PRODUCTS

Borden Lighting is proud to introduce a family of three new purpose-built LED pendant fixtures. They all offer strong uplight for broad and smooth indirect lighting and direct downlight, for true layered light in one fixture. They all have very slim profiles, made possible by LEDs. They utilize Bridgelux's GEN 4 arrays that deliver 110 lm/w. These arrays are easily changed in the field with plug-in leads. The drivers are multi-volt, 120/277, and are 0-10V dimmable. Note that the uplight is 3000K, 80CRI, and the downlight is 2700K, 90CRI.

The most impressive aspect to these fixtures is their performance. Compared to a CFL fixture, you can attain the same light levels with **70% less energy** and five times the lamplife, with completely glare-free light. For an 11ft x 11ft office you can have 30 FC and use only .43W per sq. ft., while using less energy than a 60W light bulb.

In keeping with the value part of Design, Sustainability and Value, these fixtures have a price comparable to many of our peers CFL pendants.
