

ARCHITECTURAL LIGHTING & FABRIC SHADES

The “lamp shade” seems to have found a place in architectural decorative lighting. Many are attracted to the less commercial feel of fabric. Borden Lighting offers a family of drum ceiling mounted, pendant and wall mounted fixtures that offer fabric shades in robust specification grade products. We feature linen textures in neutral colors, but are happy to help source special fabric by request.

Our standard fabric is a domestic linen in a cream color. Our optional fabric shade is an imported 100% flax linen in three neutral colors as shown below. In addition to these, we are introducing two sustainable fabrics. Our Eco-Shades are offered in a hemp and a hemp/organic cotton blend. “Industrial hemp” is made from hemp strains specifically developed for industrial uses. The blended fabric is made from 55% hemp and 45% organic cotton. Both materials are sustainably produced and are offered in a linen weave and use a US-made paper backing that replaces the standard styrene backing.

Where maintenance is a concern, we also offer a tri-laminated linen texture shade. Call the factory or ask your rep for more information about this easily cleaned material, ideal for healthcare applications.

Modified standard products—MODS—offer an opportunity to explore variations in design. Fabric shades have also come to CUSTOM LIGHTING as shown in the photo to the left.

Custom 54" dia fabric shades.
