

## THE YEAR THAT WAS IN ARCHITECTURAL LIGHTING

"Architectural Lighting" has evolved over the years to include categories of light fixtures that were not part of the original concept. Originally it had more to do with "decorative lighting." Somewhere along the way downlights became architectural lighting. For Borden Lighting, Architectural Lighting means light fixtures that are surface mounted and become part of the "architecture." Our design philosophy has always been to make them be part of the architecture, but not to compete with the architecture.

What is shown here are examples of our style of Architectural Lighting. Click on an image to see more of the project featured.
